

ERP IMPLEMENTATION PROJECT

FreshFarm Organics

Certified-Organic B2B Grocery • Odoo ERP & Industry 4.0

From business understanding to process design to a single-source-of-truth ERP solution

Great Lakes Institute of Management, Chennai

Project at a Glance

A simulated real-world ERP engagement for a B2B organic grocer, built on Odoo.

● Business Model

Strict B2B — supplies certified-organic fruit, vegetables & dairy to grocery chains, restaurants and institutional buyers via a web portal.

● Core Pillars

Certified organic sourcing, farm-to-shelf traceability, and reliable cold-chain logistics.

● ERP Backbone

Odoo as one source of truth — procurement, inventory, sales, delivery, invoicing and payments on a single integrated platform.

● Key Process Flows

Procure-to-Pay, Order-to-Cash, and Perishable Inventory / FEFO traceability.

Business Overview

FreshFarm Organics is a **certified-organic grocery operating on a strict Business-to-Business (B2B) model**. It sources fresh fruit, vegetables and dairy from organic farms and vendor partners and distributes them to registered business customers through a dedicated online B2B ordering portal.

Orders flow through a web portal where registered accounts browse the catalogue, configure bulk quantities, choose a transport mode, and pay via a **50/50 split-payment structure** — 50% advance to confirm, 50% on delivery.

Single source of truth: every transaction across vendors, warehouses, customers, payments and reporting runs through one integrated Odoo ERP backbone.

100%

Certified-organic produce

B2B

Registered buyers only

50/50

Split-payment model

1

Unified ERP platform (Odoo)

Organic Catalogue + Logistics-as-a-Service

Fruits

Organic bananas & apples, sold by weight with grade tags like “Best Seller” and “Premium Grade”.

Vegetables

Spinach, tomatoes, carrots — tagged “Certified Organic,” “Farm Fresh” and “Bulk Available.”

Dairy

Full-fat farm milk, “Cold Chain Only” — temperature-controlled handling throughout.

Three transport tiers (logistics-as-a-service)

● Cold Chain

Temperature-controlled 2–8°C; mandatory for dairy & leafy greens; next-day window.

● Standard Freight

Ambient freight for hardy produce; most cost-effective; 2–3 day ETA.

● Express Delivery

Same/next-day priority dispatch; guaranteed 24-hour delivery window.

Supporting services: live order tracking • proforma & GST-compliant tax invoicing • split-payment gateway (UPI/QR, NEFT/RTGS, Corporate Card).

Customers — B2B Only

FreshFarm serves registered business buyers exclusively — no direct-to-consumer channel.

1

Grocery & supermarket chains

Sourcing certified organic produce for retail shelves.

2

Restaurants, cafés & institutional kitchens

Requiring consistent, traceable bulk supply.

3

Wholesale distributors & APMC traders

e.g. buyers operating out of the Navi Mumbai APMC yard.

How access works

Secure B2B login

Business email + password

Identified in-system

By company name + authorized contact
(procurement manager)

Managed in CRM

Leads → opportunities → repeat sales orders

Suppliers & Vendor Onboarding

The upstream base is organic farms and certified vendors, onboarded through a formal B2B vendor-leads process — the foundation of farm-to-shelf traceability.

- Captured as leads** Vendors and farmers logged with full business details, contact persons and organic-certification documentation.
- Qualified before engagement** Vendors are vetted, then procurement runs the formal RFQ-to-PO cycle above.
- Received & inspected** Incoming goods undergo quality inspection, lot/batch & expiry capture, and putaway into central or regional warehouses.

Departments → ERP Modules

Procurement

Vendor onboarding, RFQs, purchase orders & vendor relationship management.

Warehouse / Inventory

Goods receipt, quality inspection, lot/expiry tracking, multi-warehouse stock.

Sales (B2B)

Lead-to-opportunity conversion, quotations, SO confirmation, stock reservation.

Website / B2B Portal

Vendor login, catalogue, order configuration, request-for-quote, order placement.

Delivery / Logistics

Picking, packing, quality check, cold/standard/express dispatch, status updates.

Accounting / Finance

Invoicing, vendor bills, split-payment collection, reconciliation, reporting.

Employees / HR

User roles, access rights, departmental structure, attendance, payroll.

Reporting & Dashboards

Executive, sales, inventory & finance dashboards for real-time decisions.

Why an Integrated ERP is Needed

1

Perishability & spoilage

Short shelf lives make lot/expiry tracking and FEFO rotation critical; visibility lag drives wastage.

2

Cold-chain dependency

Dairy & leafy greens need continuous 2–8°C control; any break risks quality and compliance.

3

Manual, disconnected processes

Siloed data causes mismatched stock counts, delayed invoicing and poor demand visibility.

4

Complex payment collection

The 50/50 split model requires accurate tracking of advances, proforma and final tax invoices.

5

Traceability & certification

Every batch must trace back to its source farm — hard to maintain manually at scale.

6

Multi-warehouse & scaling

Stock visibility, reorder rules and growing vendor/customer onboarding add complexity.

THE ROADMAP

Growth Objectives

End-to-end process integration on one Odoo platform

Strengthen farm-to-shelf traceability as a differentiator

Accelerate RFQ-to-PO and order-to-delivery cycles

Data-driven decisions via executive & finance dashboards

Expand the B2B vendor & customer network without added overhead

Real-time inventory & expiry visibility; reorder automation

Reduce spoilage via FEFO, IoT cold-chain & AI expiry alerts

Accurate invoicing & collections around 50/50 payments

Adopt Industry 4.0: IoT, AI forecasting, blockchain traceability

PART 2

Core Business Process Flows

Order-to-Cash · Procure-to-Pay · Perishable Inventory & FEFO Traceability

PROCESS FLOW 1

Order-to-Cash (O2C)

B2B order → quotation → sales order → FEFO pick/pack → quality check → dispatch → invoice → payment → order closed. Out-of-stock triggers a purchase requisition into P2P.

Procure-to-Pay (P2P)

Procure-to-Pay (P2P) – Incoming Goods & Quality Control

PROCESS FLOW 3

Perishable Inventory & FEFO Traceability

Batch received → lot/harvest/certificate assigned → freshness grading → zone storage → FEFO or priority allocation → expiry alerts/markdowns → dispatch → batch traceability report, audit-ready.

Perishable Inventory, Grading & FEFO Traceability - FreshFarm Organics

Recommended Odoo Modules

● Purchase

RFQs & POs with contracted organic farms and dairies; handles seasonal yield variability and lead times.

● Inventory

Lot/expiry tracking, FEFO rotation, cold vs. dry storage locations and reorder rules — targets spoilage & stock visibility.

● CRM

Captures and qualifies wholesale B2B leads before converting them into quotations and sales orders.

● Sales

Creates & confirms sales orders across channels with a single source of truth.

● Employees

Employee records and role-based access (Warehouse Staff, Procurement Officer, Accountant).

● Accounting / Invoicing

Generates customer invoices and vendor bills directly from Sales/Purchase — no after-the-fact reconciliation.

Out of scope: Manufacturing — reserved for private-label repackaging & gift hampers, outside the F&V + dairy product scope.

ERP Solution Design — End-to-End

eCommerce Website Workflow (B2B Vendors)

Industry 4.0 & AI Opportunities

INDUSTRY 4.0 INITIATIVES

1

IoT Cold-Chain Monitoring

Temperature & humidity sensors stream live data from storage and transit into Odoo, auto-flagging any 2–8°C breach.

Impact: Protects dairy & leafy-green compliance; cuts spoilage from cold-chain failure.

2

Blockchain Farm-to-Shelf Traceability

Immutable batch ledger links every lot to its source farm and organic certificate, scannable by B2B buyers.

Impact: Turns the organic-certification promise into a verifiable competitive differentiator.

3

Smart-Warehouse Automation (RFID/Barcode)

RFID/barcode putaway and picking drive FEFO rotation and real-time multi-warehouse stock accuracy.

Impact: Removes manual stock mismatches; accelerates goods receipt and dispatch.

AI USE CASES

1

AI Demand Forecasting

Predicts F&V and dairy demand by SKU and season to tune reorder points and RFQ volumes.

Impact: Fewer stockouts and less over-ordering of perishables; smoother procurement.

2

AI Expiry & Spoilage Alerts

Learns shelf-life patterns to prioritise near-expiry lots and trigger markdown/allocation actions.

Impact: Directly attacks perishability & wastage — the top Phase-1 challenge.

3

AI Vendor & Quality Scoring

Scores farms on freshness, rejection rate and on-time delivery from QC inspection history.

Impact: Sharper vendor selection; higher incoming-quality yield at goods receipt.

Sequenced adoption: stabilise data on Odoo first, then layer IoT & AI — highest ROI where perishability, cold-chain and traceability risk concentrate.

One Platform. Farm to Shelf.

FreshFarm Organics unifies procurement, inventory, sales, delivery, invoicing and payments on a single Odoo backbone — building traceability, cutting spoilage, and scaling the B2B network.
