

Phase - 3

FreshFarm Organics

ERP Implementation Specification & Business Process Documentation

Recommended Odoo Modules & Scope

To directly address FreshFarm Organics' key business challenges, the following Odoo ERP modules have been selected for implementation:

Recommended Module	Why it's needed for FreshFarm (Fruits, Vegetables & Dairy Scope)
Purchase	Places RFQs/purchase orders with contracted organic farms (F&V) and organic dairies. Handles seasonal yield variability and lead times so procurement isn't tracked on spreadsheets.
Inventory	F&V and dairy are both perishable. This module enables lot/expiry tracking, FEFO rotation, cold-storage vs. dry-storage locations, and reorder rules—directly targets the spoilage and stock-visibility problems raised in Phase 1.
CRM	Captures and qualifies wholesale (B2B) customer leads before converting them into quotations and sales orders.
Sales	Creates and confirms sales orders for both retail and B2B/wholesale (restaurant, cafe) customers, with a single source of truth instead of separate per-channel processes.
Employees	Manages employee records and role-based access rights (e.g., Warehouse Staff, Procurement Officer, Accountant), ensuring users only access the functions relevant to their job responsibilities.
Accounting / Invoicing	Generates customer invoices and vendor bills directly from Sales/Purchase, replacing the manual, after-the-fact reconciliation called out as a Phase 1 challenge.

Modules Out of Scope

- **Manufacturing:** Not needed for Fruits, Vegetables, and Dairy scope. While private-label repackaging and gift hampers exist in the full enterprise vision, manufacturing/assembly processes are excluded from this phase of ERP rollout.
